

# 3R PUSHER RP2i

Recherches & Réalisations Rémy

## Intermediate pusher for long stressing beds (300 ft. +)

When pushing strand across reinforced cages with a radio remote controlled pusher, and for beds longer than 300 ft., the strand starts to wiggle sideways because its own weight and lack of rigidity. This does not allow it to go forward any more.

This is when the RP2i pusher is needed. It's located at mid-distance (approx.) in your stressing bed. It helps the strand to go forward till the end of the bed. It is controlled by the same remote as your pusher.

Manual  
tightening of  
the rollers
